SHELTER RADIO CHEATSHEET

Basic Manual: https://www.qsl.net/nf4rc/Tech/ID-4100A-Instruction-Manual-04-26-2017.pdf
Advanced Manual: https://www.qsl.net/n/nf4rc/Tech/ICOM4100advanced-manual%20(1).pdf

| MAJOR BUTTONS AND KNOBS	
MENU(upper L)	**Quick Menu** (VERY USEFUL)
VFO/MEM (V/M)	Squelch KNOB
MODE	Volume KNOB
M/W (memory write)	
RS--> Callsign capture	
MON	

QUICK MENU ITEMS:
  Band Select (if in VFO mode)
  Power Level Select
  DUP (duplexer) select
  TONE select

If you need to change the tone frequency (uncommmon) you will need to use the (main) MENU button, upper left   For almost all of our usages, a memory channel or a VFO frequency with adjustments via the Quick Menu wll suffice.

ADDING DATA OPTION:

- "A/B" Switch (white box) allows selection of microphone or our data interconnection system.
- Connect the common port to the ID-4100 Mic jack (using RJ45 patch cable)
- Connect one port ("A") to the handmic. Connect the other to the blue/yellow cable as below:
- Special blue/yellow cable that connects ID-4000, its speaker output, a Signalink, and an external speaker to allow DATA comms
- Then easily choose between MIC (voice operation) or DATA (our interconection to your Signalink)

We do not have computers or Signalinks for the go-boxes. Use your own, with the jumpers set for our standard "Alachua County" settings.
